ABSTRACT

A study was done of minority high school graduates from Seattle, Washington, and how they moved into and through the higher education system. The study compared minority students and a group of white students all of whom were seniors in the Seattle public high schools during the 1982-83 academic year. In the Spring of 1989, 48 postsecondary institutions in Washington state searched their records to determine which of the former high school seniors enrolled in college during the preceding 6 years. The findings were based on 1,331 minority high school seniors and a random sample of 400 whites. The study found that there is a wide variation in college-attendance and degree-completion rates among ethnic groups, that there is a strong relationship between high school grade point average and baccalaureate degree completion, that in comparing ethnic groups the higher the rate of high school graduation, the higher the rates of college attendance and completion of either a certificate, 2-year degree, or bachelor's degree, and that there are different college-attendance and degree completion rates for males and females within ethnic groups. Appendixes detail the data collection procedures and list institutions that provided data for the study as well as offering extensive tables of data. (Author/JB)

Acknowledgements

The Seattle Minority Transfer Team and the authors of this report wish to thank all those individuals at the 48 two-year and four-year colleges and universities throughout the state of Washington who spent time on the tedious task of checking enrollment records. Without their diligent efforts this report would not have been possible.

Special thanks are due to Gerald Gillmore of the University of Washington for providing the resources to prepare the data for analysis, and to Julie Hungar of the Seattle Community Colleges for her careful review of earlier drafts and her many suggestions for improvement that have been incorporated in this version.

We also wish to thank those whose technical assistance was essential to the completion of this project: Diane Haynes and Charlie Anderson from the Seattle School District; Earl Hawkey from the University of Washington; and Robin Schuy from the Seattle Community Colleges. In addition, we want to thank George Sanders from the Seattle School District and Loretta Seppanen from the State Board for Community College Education for their advice to the research team.

And, finally, thanks to Jodie Robinett of the Seattle Community Colleges and Joan Wilson of the University of Washington for their patience, speed, and competence in helping to complete many drafts of this report.

COLLEGE ATTENDANCE AND DEGREE COMPLETION OF 1982-83 MINORITY SENIORS FROM SEATTLE PUBLIC SCHOOLS AT WASHINGTON COLLEGES AND UNIVERSITIES

Summary of Findings

The Seattle Minority Transfer Team, an ad hoc committee dedicated to the improvement of postsecondary opportunities for minority students, conducted this study to determine the college-attendance and degree-completion rates of ethnic minority students in the Seattle School District. The Minority Transfer Team includes representatives from the Seattle School District, the Seattle Community Colleges, Seattle University, the University of Washington, Seattle Pacific University, and the Greater Seattle Chamber of Commerce.

The following findings are based on 1331 minority high school seniors and a random sample of 400 white seniors enrolled in the Seattle School District during academic year 1982-83. In June 1983 these students ranged in age from 16 to 21. The study determined that:

- There is wide variation in college-attendance and degree-completion rates among ethnic groups.
- Students from different ethnic groups are negotiating the path to and through college with unequal success.
- There is a strong relationship between high school GPA and baccalaureate degree completion. The higher a student's high school GPA, the more likely he or she was to have completed a baccalaureate degree.
- In comparing ethnic groups, the higher the rate of high school graduation, the higher the rates of college attendance and completion of either a certificate, two-year degree, or bachelor's degree.
- There are different college-attendance and degree-completion rates for males and females within ethnic groups.

Introduction

The Seattle Minority Transfer Team, an ad hoc committee dedicated to the improvement of postsecondary opportunities for minority students, conducted this study to determine the college-attendance and degree-completion rates of ethnic minority students in the Seattle School District. Minority Transfer Team members include representatives from the Seattle School District, the Seattle Community Colleges, Seattle University, the University of Washington, Seattle Pacific University, and the Greater Seattle Chamber of Commerce.

The Minority Transfer Team has sponsored conferences and workshops in the Seattle area to promote strategies for increasing the number of minority students who enroll in college, and to improve their persistence in educational programs. One result has been the opening at Seattle Central Community College of Middle College High School (a high school program in a community college setting) conducted by the Seattle Public Schools. The Transfer Team's planned activities include joint recruiting efforts by colleges in Seattle's middle and high schools, transfer centers in community colleges to help students plan for transfer, faculty collaboration to improve two- and four-year college articulation, student-led study groups and peer counseling, and mentoring programs to help students move from one educational level to another.

To help guide these activities and to provide baseline data for evaluating future programs, a subcommittee of the Minority Transfer Team designed and implemented this study of minority students and a comparison group of white students, all of whom were seniors in the Seattle public high schools during the 1982-83 academic year. In the Spring of 1989, 48 postsecondary institutions in Washington state were asked to search their records to determine which, if any, of the former high school seniors enrolled in college during the preceding six years. (Data-collection procedures are described in detail in Appendix A.) All 48 (six four-year public, 15 four-year independent, and 27 two-year public, listed in Appendix B) cooperated.

This study was designed to provide a picture of how minority high school seniors move into and through the higher education system toward the goal of the bachelor's degree--a picture of transfer patterns. In particular, this study addressed the following questions:

- What proportion of students from each ethnic group attended college?
- What proportion of each ethnic group completed two-year degrees?
- What proportion completed four-year degrees?
- What type or combination of types of colleges did students from each ethnic group attend?
- What was the relationship in each ethnic group between high school grade-point average (GPA), college attendance, and degree completion?
- What paths did students follow through the educational system in Washington state?
- Did college-attendance and degree-completion rates differ for males and females?

Study Limitations

There are three limitations to this study: First, because only colleges in Washington state were asked to check their enrollment records, those former seniors who went to college outside the state were not accounted for. Presumably, a substantial proportion of those with high GPA's enrolled in out-of-state colleges. A later study may be conducted to track these students. Second, because social security numbers of the former seniors were not available, almost all record searches were done manually, rather than by computer. Consequently, women who had enrolled in college under a married name could have been overlooked if there was no cross reference to a former name. And, in general, there is the likelihood that a few former seniors who enrolled in college were not found simply because a manual search for names is not likely to be as accurate as a computer search for social security numbers. Third, students who would have been seniors in the 1982-83 academic year but left high school before their senior year were not accounted for in the computation of high school graduation rates or college-enrollment and graduation rates. Therefore, these rates are necessarily overestimated for high school students in general.

Discussion of Findings

The findings summarized earlier and discussed below are based on all the minority high school seniors and a random sample of white seniors who were enrolled in the Seattle School District during academic year 1982-83. In June of 1983 these students ranged in age from 16 to 21.

Rates of College Attendance and Degree Completion

Table 1 shows the proportion of students from each ethnic group who attended college along with the proportions who completed degrees by Spring 1989 or were still enrolled. **What is striking about the percentages in Table 1 is the wide variation in college-attendance and degree-completion rates among ethnic groups.** Note that at least 60% of the Chinese, Japanese, and Vietnamese groups attended college (received at least one credit) compared to 35% of Southeast Asians, 29% of Samoans, and 18% of Native Americans. The remaining groups attended college in the following proportions: 50% of Filipinos, Koreans, and Other Asians, somewhere from 42% to 50% of Whites, 37% of Blacks, and 36% of Hispanics.

Degree-completion rates were similarly variable: 25% of Japanese students and 22% of Chinese students completed a bachelor's degree as did between 12-18% of Whites. Rates for Vietnamese, Filipino and Other Asian students were 11%, 9% and 8%. And 3% or fewer of Blacks, Hispanics, Koreans, Native Americans, Southeast Asians, and Samoans completed a bachelor's degree.

Rates of completion for either a certificate or an associate degree also showed wide variation: The proportions of Vietnamese, Chinese, and Southeast Asians who completed either a certificate or two-year degree were 14%, 13%, and 12% compared to 9%, 8%, and 7% for Koreans, Japanese, and Samoans. Rates for the remaining groups were: Whites 4-10%, Filipinos 5%, Hispanics and Native Americans 4%, Blacks 3%, and Other Asians 0%.

In Figure 1 ethnic groups are ordered by the proportion of all seniors in the group who graduated from high school; the group with the highest high school graduation rate (Chinese) appears on the left. Figure 1 shows that, in general, the rates of college attendance, completion of a certificate or two-year degree, and completion of a bachelor's degree decrease for the various ethnic groups as high school graduation rates decrease.

TABLE 1. RATES OF HIGH-SCHOOL GRADUATION, COLLEGE ATTENDANCE, AND DEGREE COMPLETION BY ETHNIC GROUP FOR 1982-83 SEATTLE PUBLIC SCHOOL SENIORS

				Type of College or Combination of Types of Colleges Attended*										
Ethnic Group	Number in Group	Graduated from High School	Attended College	2-Year	4-Year Public	4-Year Ind.	4-Year Public & Ind.	2-Year & 4-Year Public	2-Year & 4-Year Ind.	2 & 4-Year Public & 4-Year Ind.	Completed Certificate	Completed AA/AS	Completed BA/BS	Still Enrolled

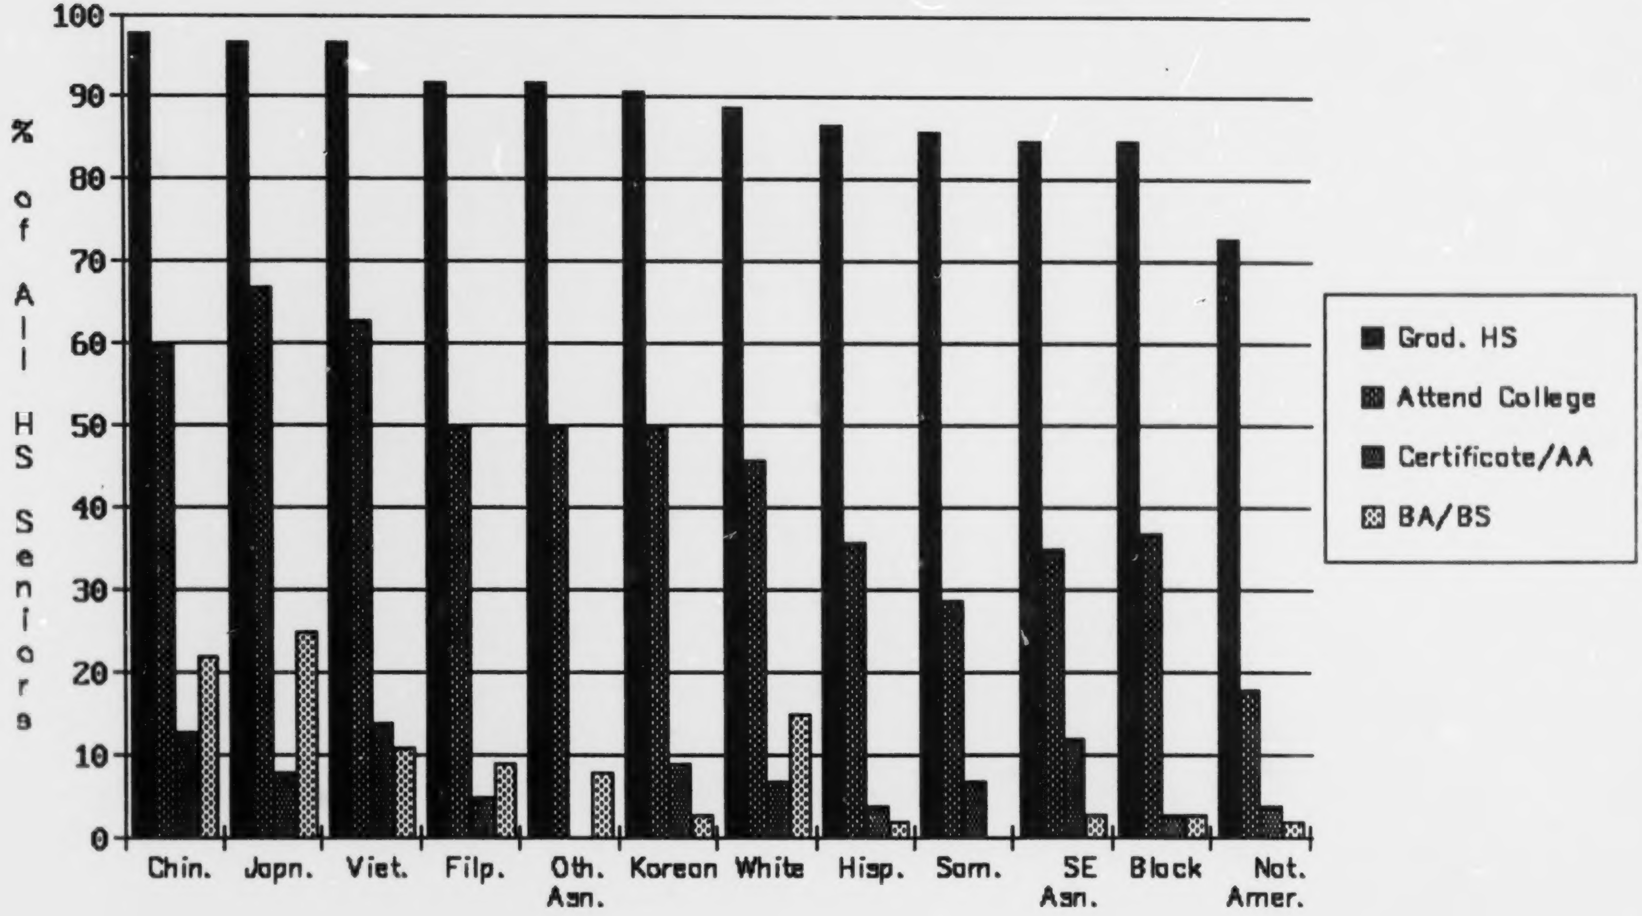
Southeast Asian	60	85%	35%	30%	0%	0%	3%	2%	0%	0%	7%	5%	3%	2%
Vietnamese	120	97%	63%	43%	3%	2%	0%	12%	3%	1%	4%	10%	11%	10%
Total of All Minority Groups	1331	90%	46%	23%	12%	2%	1%	7%	1%	1%	2%	5%	9%	6%
White	400**	86-92%	42-50%	18-24%	13-19%	1-3%	1-3%	3-7%	0-2%	0-2%	1-3%	3-7%	12-18%	3-7%

* Due to rounding error, the sum of the percentages for each ethnic group in these seven columns may not equal the percentage in the "Attended College" column.

** The 400 white seniors were selected randomly to represent all 2000 white students. There is a 95% probability that the percentages for the entire population of white students are within the ranges indicated.

Figure 1.
Rates of HS Graduation, College Attendance and Degree Completion by Ethnic Group



Type or Combination of Types of Colleges Attended

In Table 1 the percentage of each ethnic group who attended college is broken down further by the type of college or combination of types of colleges attended. This breakdown reveals wide variation in the ways students from different ethnic groups made use of the higher-education opportunities in Washington state. For example, while 60% or more of Japanese, Chinese, and Vietnamese students attended college, 16% of the Japanese students attended a two-year college exclusively compared to 24% of the Chinese and 43% of the Vietnamese students. The converse relationship is true for the proportion of these same three groups who attended only a four-year public, four-year independent, or combination of four-year public and independent institutions: 41% (38% + 3% + 0%) of the Japanese students did so compared to 27% (22% + 2% + 3%) of the Chinese and 5% (3% + 2% + 0%) of the Vietnamese students.

Relationship of High School GPA to Degree Completion

Table 2 indicates there is a strong relationship between high school GPA and baccalaureate degree completion. Of the 304 minority students with high school GPA's in the 2.50-2.99 range, 3.6% (11) completed a bachelor's degree within the six-year period covered by the study. Of the 259 minority students with GPA's in the 3.00-3.49 range, 12.7% (33) received degrees, and of the 174 students in the 3.50-4.00 range, 39.7% (69) did so. Students with GPA's in the 3.50-4.00 range were eleven times more likely to complete a bachelor's degree than those in the 2.50-2.99 range. And this ratio is a conservatively low estimate considering there were 63 minority seniors in the 3.50-4.00 GPA range who did not attend college in Washington state (see Table 3). It is highly likely that a significant number of these students attended college and completed a bachelor's degree elsewhere.

This relationship between high school GPA and baccalaureate completion rates may help explain why some minority groups have lower graduation rates than others. As Table 4 indicates, the ethnic groups with large proportions of students with GPA's less than 3.00 were the same groups with low bachelor's degree completion rates as shown in Table 1.

Table 5 shows the mean high school GPA for 1) all high school seniors in each ethnic group, 2) those who attended college, and 3) those who received two-year or baccalaureate degrees. For all ethnic groups, students who attended college had higher mean high school GPA's than did the total high school group. And for most ethnic groups, the sub-group that completed certificates or associate degrees or completed baccalaureate degrees had higher mean GPA's than all high school seniors combined.

In general, students who attended four-year colleges exclusively had higher high school GPA's than did students attending only two-year colleges or a combination of two-year and four-year colleges. Exceptions were Hispanic and Vietnamese students. Hispanic and Vietnamese students who attended a combination of two-year and four-year colleges had higher GPA's than did those who attended only two-year or four-year colleges. Native American, Samoan, and Southeast Asian students also did not follow the general pattern, but there were too few students in these groups who attended four-year colleges to allow meaningful generalizations. And these exceptions could well disappear if the students who attended an out-of-state college were accounted for. It is reasonable to assume that some proportion of the students shown in Table 3, especially those with GPA's of 3.0 or higher, attended four-year colleges in another state. It is also possible, although not very likely, that the students in Table 3 with high GPA's did not go to college at all. Just what they did needs to be the subject of further research.

Taken together, these wide variations in high school GPA's, high school graduation rates, rates of college attendance, types of colleges attended, and rates of degree completion demonstrate that **students from different ethnic groups are negotiating the path to and through college with unequal success.** This

is strong evidence of the need to bolster the educational process by providing interventions that will increase high school preparation and GPA's, college attendance, and degree completion for those groups with low rates and for some individuals within the more successful groups.

Postsecondary Outcome Paths

Figure 2 shows the different paths students followed through the educational system in Washington state. The first branching of Figure 2 shows the number and percent of minority and white high school seniors in the study who either attended two-year colleges only, did not attend college, or attended four-year colleges only. The next branching (on the left) shows the number and percent of students who attended two-year colleges who did or did not complete a certificate or two-year degree. The final branching shows the number and percent of college attendees who, as of spring term 1989, had completed a bachelor's degree, were still enrolled in some college or university, or were not enrolled anywhere.

A close look at the 115 (22 + 8 + 85) minority students in Figure 2 who completed a bachelor's degree shows that 26% of them attended a community college compared to 18% of the 61 (8 + 3 + 50) white students who completed a bachelor's degree. This suggests that community colleges played an important role for minority students in obtaining a bachelor's degree. At the same time, the bottom branch of Figure 2 reveals that the proportion of students who completed a bachelor's degree is lower for students who chose the community college path after high school compared to their classmates who went to four-year colleges only. This is to be expected given the fact that only 40% of the students who enroll in a community college do so with the declared intent of transferring to a four-year college. This fact accounts to some degree for the disparity in these figures: of the minority seniors who took the community college path, 7.2% (5.3% + 1.9%) completed a B.A. or B.S. degree compared to 44.7% of those minority seniors who attended four-year colleges only. And a similar difference was true for the white sample: of those who took the community college path, 10.1% (7.3% + 2.8%) completed a B.A. or B.S. degree compared to 66.7% who attended four-year colleges only.

College Attendance and Degree Completion for Males vs. Females

Table 6 suggests that there are different college-attendance and degree-completion rates for males and females within ethnic groups. More Chinese, Southeast Asian, and Vietnamese men went on to college than women. More Korean, White, Hispanic, and Black women went to college than men.

Although Japanese men and women attended college at about the same rate, significantly more women completed a bachelor's degree than men, suggesting a retention problem among Japanese men. And, although many more Black and Hispanic women attended college than men, male and female graduation rates were nearly the same, indicating higher attrition rates among Black and Hispanic women than among men.

These differences between men and women in college attendance and variations in the rates of graduation provide information that should be useful for both high school and college counselors working to improve baccalaureate completion rates of minority students.

Conclusion

The wide variation in outcomes among ethnic groups found in this study is strong evidence in support of the idea that innovative instructional strategies will be necessary if more students are to move successfully into and through the higher-education system. More specifically, this evidence suggests that more work must be done to improve the college preparation of certain minority groups if their baccalaureate graduation rates are to increase. College enrollment opportunities and remediation at the college level seem unable to overcome early academic deficiencies, and colleges must look, therefore, for ways to form partnerships with the K-12 system if baccalaureate completion rates are to be significantly increased from current levels. The need for assistance is especially important given that the percentage of minority seniors in the Seattle public schools has increased steadily in the last eight years from 46% to 56%.

Recommendations

We recommend that both two-year and four-year colleges form partnerships with the K-12 system to encourage students from groups with low college-attendance rates to go on to college and help them prepare to do so.

We recommend that two-year and four-year colleges form partnerships with each other to encourage students in two-year colleges to transfer to four-year colleges and to help them prepare to do so.

We recommend that secondary and postsecondary educational institutions include in their student data bases information identifying special programs in which a student has participated. The different intervention strategies that have been tried are numerous, and if the most effective path is to be charted for future generations, the effectiveness of each program must be assessed longitudinally. Only by associating students with these programs and following them through high school and on into college will we be able to make informed decisions for future programs. Further, to facilitate this we recommend that all schools and colleges include student social security numbers as a data element in their student data system.

This study has provided a picture of college enrollment and degree completion not previously available. At the same time it has raised questions not yet answered: How many of the 1982-83 seniors enrolled in out-of-state colleges? Of those who did, how many completed a degree? What were the effects, if any, of various intervention programs on rates of high school graduation, college attendance, and degree completion? What proportion of community college students might want to transfer to a four-year college, but do not because of perceived barriers in the way of continuing their education? We recommend that these questions guide further research.

Appendix A: Data-Collection Procedures

The subjects of this study were high school students in the Seattle School District who were enrolled as seniors sometime between September 1, 1982 and August 31, 1983. At the outset of the study there were 1341 minority seniors; ten were excluded from the analysis because of coding ambiguities. However, for all practical purposes, the remaining 1331 can be considered to be all the minority seniors in the Seattle School District during academic year 1982-83. In addition, for purposes of comparison, a random sample of 400 white seniors was selected from the total of approximately 2000 white seniors enrolled during academic year 1982-83. Because the white seniors were selected randomly, small differences in rates of high school graduation, college attendance, or degree completion, or small differences in high school GPA's between a particular minority group and whites are likely to have resulted from "the luck of the draw," not from a true difference between the groups. Seniors, minority or white, who moved out of the Seattle School District or transferred to a private school during the 1982-83 school year were excluded from the study.

The names of the study's subjects, with accompanying demographic data, were extracted from the Seattle School District's student-information system and given to the research team on magnetic tape. A member of the team transferred the list of students to a diskette and produced an alphabetized, printed roster of names and selected elements of demographic data. Both the diskette and the roster were duplicated and mailed to the presidents of each two-year college and four-year college or university in the state of Washington. Supplemental, detailed instructions were sent to the community colleges, allowing them to use standardized software to produce enrollment lists limited to students who could plausibly have been seniors in the Seattle School District during the 1982-83 academic year.

The cover letter sent to colleges and universities (48 in all) was signed by the presidents of Seattle University and the University of Washington and by the chancellor of the Seattle Community Colleges. By transmitting the request for data collection at the chief-executive level, the research team hoped to insure that the request would be taken seriously and acted on quickly. Since the team realized the actual work of searching enrollment records would fall to each institution's registrar or director of institutional research, the team wrote to them before writing to their presidents. In this first letter, the people who would be collecting data were asked to comment on the proposed procedures. Also, in this letter, the team acknowledged that the records search was going to be difficult because the roster of former high school seniors did not contain social security numbers (SSN's). If SSN's had been available, many colleges and universities could have conducted a computerized search of their records with relative ease. Since SSN's were not available, most colleges conducted a manual search of their records. The following instructions were printed on the cover page of the roster:

> This is a roster of the 1741 students we are tracking throughout the state of Washington. These students were seniors in the Seattle School District in the 1982-83 academic year. Of the total, 1341 are minorities and 400 are white.
>
> This roster contains some, but not all, of the data elements you can use to determine how many of the 1741 students have enrolled at your school between summer 1983 to present [spring term, 1989]. Additional data elements are available on the accompanying diskette should you need more information in finding or verifying matches between the roster and your records. Diskette data elements are listed on the sheet titled "Diskette Layout for Minority Enrollment Study." You may want to print a more detailed roster from the diskette.

While the colleges and universities were asked to submit the results of their records search by May 1, 1989, the team, in fact, negotiated later deadlines with several institutions. As of May 1, half of the 48 (six four-year public, 15 four-year independent, and 27 two-year public) had submitted data. By the end of June, only six institutions had not yet completed the records search, and finally by December all 48 submitted data.
